HTML and CSS Internship

Project Title : Personal Portfolio Website

"This project is a responsive single-page personal portfolio engineered using pure HTML5 and CSS3 to showcase my academic projects, technical skill matrices, and contact details. It integrates advanced layout systems including CSS Flexbox for alignment behaviors and an auto-fitting CSS Grid layout for project showcase cards. By implementing custom mobile media query breakpoints, the entire document layout scales fluidly down to mobile dimensions, completely eliminating horizontal scrolling issues while preserving a clear visual hierarchy."
